Project Proposal

Topic: Minesweeper
Prepared for: Final Project
Prepared by: Chun-Chieh Liang
March 2, 2017

Objective

I've been working on the topic for a month. To bring out a presentable product, I've studied Spring MVC, Hibernate, machine learning frameworks and I followed the instructions of the tutorials. Although I've learned a lot during this period, I found the knowledge I gained is so superficial that I couldn't finish a project before this semester ends. So I decided to make a simple but classic game, minesweeper. In this way, I could achieve the goals with less suffering.

Goals

MineSweeper main program

Text Message: The users could communicate with each other by text-based message.

Solution

JavaFX

Messaging: Web socket
